Top stories of the week

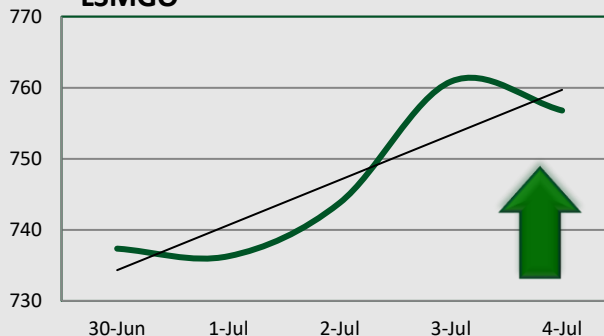

➤ Eight key OPEC+ members, including Saudi Arabia and Russia, have agreed to accelerate their oil production increases, boosting output by 548,000 barrels per day (b/d) in August. This decision, confirmed in a recent virtual meeting, surpasses market expectations and represents a faster pace of supply restoration compared to the 411,000 b/d hikes seen in the preceding three months. The move is part of a broader strategy to unwind previous voluntary cuts, bringing the cumulative increase to 1.91 million b/d, which is progressively closer to the 2.2 million b/d pledged for December 2024. The group justified the increase by citing a stable global economic outlook and strong market fundamentals, such as low inventory levels. Following the announcement, ICE August Brent futures experienced a marginal dip, trading at \$68.28 per barrel. (Ship & Bunker, July 7, 2025)

➤ On Friday, global bunker prices showed a mixed performance, with average VLSFO prices remaining largely unchanged despite a concurrent drop in crude futures. Ship & Bunker's G20-VLSFO Index, which tracks prices across twenty major bunkering hubs, held steady at \$555.50 per metric tonne (mt), its highest point since late June. In contrast, the G20-HSFO Index saw a decrease of \$3/mt to \$466.50/mt, while the G20-MGO Index was stable at \$768/mt. This price resilience occurred as ICE Brent crude futures slipped to \$68.30 per barrel. At the top four bunkering ports, VLSFO prices trended slightly downward, with minor declines recorded in Singapore, Rotterdam, and Houston, while Fujairah's price was little changed. Brent crude futures continued to soften on Monday morning. (Ship & Bunker, July 7, 2025)

OVERVIEW

This report contains the parameters of fuel prices, and is intended to provide information regarding the two primary used fuels in marine fuel bunkering tasks. The prices presented in this weekly report reflects the most strategic areas and hot spots that acts as a guiding line for the fuel prices all over the world.
