Top stories of the week

➤ August recorded the strongest monthly ordering activity for alternative-fuelled vessels since October 2024, with 52 vessels ordered. LNG remained the dominant fuel choice, accounting for 46 of the 52 orders placed during the month. Container ships led activity with 30 LNG-fuelled orders, followed by 12 LNG-fuelled car carriers. Additional orders included four ethanol-fuelled bulk carriers and two hydrogen-fuelled bulk carriers. One LNG bunkering vessel was also added. The strong August performance followed an equally active July, which recorded 47 alternative-fuelled vessel orders. Combined, the two months indicate a significant recovery in alternative-fuel vessel investments after a slower start to 2026. Year-to-date orders have reached 242 vessels, representing a 27% increase compared with the same period in 2025. LNG continues to dominate the market, accounting for 63% of all alternative-fuel vessel orders this year. Container ships and car carriers remain the primary drivers of LNG adoption. The data highlights growing confidence in alternative-fuel technologies across the maritime sector. DNV's AFI platform continues to track the industry's progress toward decarbonization and energy transition goals.
